The present invention relates to a Moraxella catarrhalis genomic library comprising of a combination of 41 nucleic acid molecules (see AAF20514 AAF20554). The library has a number of uses described in the specification e.g. is useful for aidentifying diagnostic and therapeutic compositions. M. catarrhalis (Branhamella catarrhalis) is a large aerobic, gram-negative diplococus, normally found among the bacterial flora of human upper airways. M. catarrhalis is known to cause acute, localised infections such as cuttis media, sinusitis and bronchopulmonary infection and life-threatening, systemic diseases including endocarditis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               803 GCCATATCAGTGGAGCAACCTTCCCTTTGATTGATAATGACAGAAGATGAACAAAG 862

                                                                                                                                                                                                                                                                                                                 The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Albrimer's diseases, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; prostate cancer; cytostatic; carcinogen; pharmacodyanamic marker;

(I) is useful for:

(a) assessing whether a patient is afflicted with prostate cancer;

(b) monitoring the progression of prostate cancer in a patient;

(c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient;

(d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient;

(e) selecting a composition for inhibiting prostate cancer in a patient;

(f) assessing the prostate cell carcinogenic potential of a compound;

(f) assessing the prostate cell carcinogenic potential of a compound;

(g) determining whether prostate cancer has metastasized in a patient;

(h) assessing the aggressiveness or indolence of prostate cancer in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer, stage of prostate cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       735 ATAGAGAAAACCGTGAGGAAAGGAGTCGATACCATAAATTCCGATTAAAAAAGGGAGTGC 794

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer, s disease, AlbS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                 Nucleic acid comprising fragment of chemically modified gene, useful for diagnosis and treatment of diseases associated with abnormal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a nucleic acid comprising a sequence (I) of at least 18 bases in length of a segment of chemically pre-treated genomic DNA whitch has any one of the sequences of (ABKA31919-ABKA4032) or its complement. Also included are an oligonuclectides which hybridises to (I), probes for detecting oytosine methylation or single-complements (SNP) in (I), an array of oligomers to (I), probes for detecting oytosine methylation or single-complements (SNP) in (I), an array of oligomers or peptide polymorphisms (SNP) in (I), an array of oligomers or peptide nucleic acids for analysing oytosine methylation states of the CpG dinuclectides of (I). The array is useful cor peptide nucleic and/or epigenetic parameters, classification, differentiation, grading, staging, treatment and/or diagnosis of astroychomas, or the predisposition to astrocychomas by analysing openetic and/or epigenetic parameters, classification, differentiations, involves obtaining a biological sample containing genomic CDNA, extracting the genomic DNA, converting cytosine bases which are methylations, involves obtaining a biological sample containing genomic CNNA, extracting the genomic DNA, converting cytosine bases which are monther base which is dissimilar to cytosine in terms of hybridisation canother base which is dissimilar to cytosine in terms of hybridisation containing genomic DNA fragments using the array and a polymerase, where the analysing methylation status of the cytosine positions by reference to analysing methylation status of the cytosine positions by reference to analysing methylation status of the cytosine positions by reference to bisulphite, hydrogen sulphite or disulphite. The amplificates are detachable made or or more cytosine positions by the cytosine positions or tissues, as opposed to background DNA. The amplificates are detachable molecule fragments by any any assisted laser desorption/ionally, the labels of the indicates are detachable molecule fragments and positioned for a better detection mass spectrometer
                                                                                                                                  Human; ds; astrocytoma; cytostatic; staging; cysteine methylation; CpG; bisulphite; brain tissue; MALDI; ESI; electron spray mass spectrometry; matrix assisted laser desorption/ionization mass spectrometry.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel chemically modified genomic DNA sequences, useful in the characterisation, classification, differentiation, grading, staging, treatment and/or diagnosis of astrocytomas or predisposition to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

The invention relates to an isolated polynucleotide which is a polymcrphic variant of glutamate receptor, metabotrophic 3 (GRM3) is a receptor for glutamate, the major excitory neutotraphic variants of glutamate receptor, metabotrophic 3 (GRM3) is sogene. GRM3 is a receptor for glutamate, the major excitory neutotransmitter in the mammalian central nervous system. Human GRM3 coated no chromosome 7421.1-q21.2 is expressed in human fotall and adult whole brain especially in the caudate nucleus and corpus collosum. GRM3 CMM3 is useful in gene therapy and also for studying the expression and function of GRM3. GRM3 polypeptide is used for screening drugs. A recombinant non-human organism is used to study expression of GRM3 SC in vivo screening and testing of drugs targetted against GRM3 protein, and for testing the efficacy of therapeutic agents and compounds for neurological disorders in a biological system. GRM3 compounds for testing diseases associated with GRM3 activity, e.g., neurological disorders. The present sequence is human GRM3 gene fragment containing polymorphic sites.
                                                                                                                                                                                                                                                                                                                                     and adult
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /*tag= a

The invention relates to an isolated polynucleotide which is a polymorphic variant of glutamate receptor, metabotrophic 3 (GRM3) is areceptor for glutamate, the major excitory sequence GRM3 is a receptor for glutamate, the major excitory neurotransmitter in the mammallan central nervous system. Human GRM3 located on chromosome 7421.1.421.2 is expressed in human foretal and adult whole brain especially in the caudate nucleus and corpus collosum. GRM3 or located on GRM3 of GRM3 (GRM3 GRM3) in the caudate nucleus and corpus collosum. GRM3 crecombinant non-human organism is used to study expression of GRM3 GC in vivo, for in vivo screening and testing of drugs targetted against compounds for neurological disorders in a biological system. GRM3 compounds for treating diseases associated with GRM3 and compounds for treating diseases associated with GRM3 activity, expression of GRM3 chuman GRM3 gene fragment containing polymorphic sites (PS):
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ;;

The invention relates to a nucleic acid (1) comprising a segment of 18 bases of chemically pretreated DNA of angiogenesis-associated genes (II) having sequences (ABQ66971-ABQ67718) or their complements. (1), also related oligomers, are used to evaluate the methylation status and/or single-nucleotide polymorphisms, in angiogenesis-related genes, for diagnosis and treatment of eye diseases, proliferative retinopathy, necvascular glaucoma, solid tumours, inflammation, rheumatoid arthritis, psoriasis, arteriopathy, macular degeneration caused by neovascularisation, psoriasis, arterioscierosis, inflammation well diseases, ulcers and companion and companion and companion and companion and control of the companion and companion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; anglogenesis; methylation; eye disease; glaucoma; tumour; inflammation; rheumatoid arthritis; diabetic retinopathy; antiulcerds; macular degeneration; inflammatory bowel disease; Crohn's disease; antirheumatic; antiarthritic; antidiabetic; antipsoriatic; antiarteriosclerotic; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                οy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a nucleic acid comprising a sequence of 18 bases, of a segment of chamically pretreated DNA (CP DNA) e.g. with bisulphite, of genes associated with tumour suppression and oncogenes having a sequence taken from 536 (actually 533 since numbers 408, 458 and 500 are missing from the sequence listing) sequences complementary to (Ss). The nucleic acid may be eptide nucleic acid coligomer (PNA) of at least 9 nucleotides and may form part of a set of probes for detecting the cytosine methylation state and cumours. The probes can also be used in a method for ancers and tumours. The probes can also be used in a method for ascertaining genetic and/or epigenetic parameters for the diagnosis and/or therapy of existing diseases associated with CpG dinucleotides e.g. canneers and tumours. The probes can also be used in a method for ascertaining genetic and/or epigenetic parameters for the diagnosis and/or therapy of existing diseases or the predisposition to specific compared to another set of genetic and/or epigenetic parameters may be differences serving as basis for diagnosis and/or prognosis events which are disadvantageous to patients. The present sequence is one of the 533 genomic sequences derived from tumour suppressor genes and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                Fragments of chemically modified genes associated with tumour suppressor genes and oncogenes, useful in designing primers and probes for analysing diseases associated with cytosine methylation state e.g.

The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Albrimer's disease, AlbS, epllepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 4049 TAAACCTCCCCACACTATTACACGAATAAATTTTATCTTAATCCTACCAAAATAAAAAT 3990

```
The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Albrimer's disease, AlbS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/alcerative bowel diseases. The present sequence is a gene of the invention.
                                 Nucleic acid comprising fragment of chemically modified gene, useful for diagnosis and treatment of diseases associated with abnormal

                                                                                                                                                                                                                                  ô
```

```
The present invention relates to chemically modified DNA sequences of signal transduction associated genes. The DNA sequences are chemically modified using a solution of bisulphite, hydrogen sulphite or modified using a solution of bisulphite, hydrogen sulphite or disulphite. Also disclosed are oligonotteotides and/or PNA oligomers of disulphite. Also disclosed are oligonotteotides and/or PNA oligomers of or detectoring the cytosine methylation state (ppG islands) of these genes, and a method for the diagnosis and/or therapy of genetic and epigenetic parameters of genes associated with signal transduction. The genomic DNA can be obtained from cells or cellular scomponents which contain DNA, e.g. cell lines, biopsies, blood, sputum, stool, urine, cerebral spinal fluid, tissue embedded in paraffin such as tissue from eyes, intestine, kidney, brain, heart, prostate, lung, breast or liver, histologic object slides, and all their possible compinations. The sequences of the invention are useful for the diagnosis and therapy of diseases associated with signal transduction e.g. solid tumours and sequences of different genes associated with signal transduction, or their complementary sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; signal transduction associated gene; cytosine methylation state; CpG island; signal transduction associated disease; solid tumour; cancer; antitumour; cytostatic; mutant; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Oligonucleotide for diagnosis and therapy of diseases associated with signal transduction e.g. cancer, comprises chemically modified genomic sequences of genes associated with signal transduction

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Albriemer's disease, AlbS, eplilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AlbS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arterlosclerosis, anomana, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel
                                                                                                                                                                                                                                                                  2002 TITAAAATIGATATGAAAAAATIAATGIATAAGAATAGITAATAATITAAAGIIAYAGI 2061

The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/dicerative bowel diseases. The present sequence is a gene of the invention.

AAH52304 to AAH53970 represent nucleic acids (I) encoding polypeptides (II), given in AAG81454 to AAG83120, from Staphylococcus epidermidis. (I) and (II) can have antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the S. epidermidis polypeptides (II) via the production of vectors containing them which are used to produce hosts cells which express the polypeptides. The polypeptides (II) (and/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their activity and therefore identify compounds that may be used for the treatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to

To AAG83120, from Staphylococcus epidermidis. (I) and (II) can have antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the scaping them which are used to production of vectors containing them which are used to produce hosts cells which express the polypeptides. The polypeptides (II) (and/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their creatment of S. epidermidis infections, e.g. endocarditis. AAH5397 to AAH55090 represent specifically claimed S. epidermidis genomic DNA AAH5509 represent oligonucleotide sequences and primers which are used in the exemplification of the present invention. AAH55091 to sequences given in the sequence listing of the present specifically claims all the polypucleotide sequence listing of the present specification, one was those the sequence listing only goes up to SEC IN NO:4454 so even or sequences are given in the disclosure for SEC IN NO:4455 to 4472, no sequences are given in the disclosure for SEC IN NO:4455 to 4472,

AAH55090 represent specifically claimed S. epidermidis genomic DNA polymoleotide sequences from the present invention. AAH55091 to AAH55098 represent oligonoclectide sequences and primers which are used in the exemplification of the present invention.

N.B. The present invention specifically claims all the polymucleotide sequences given in the sequence listing of the present specification, however the sequence listing only goes up to SEQ ID NO:4454 so even though sequences are given in the disclosure for SEQ ID NO:4455 to 4472, no sequences are present for SEQ ID NO:4455 to 4472.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2971 GAACACCCCAATATTAAACAAAACCACTTTTTACTCTAACTCTAAATAAAAACCACTTTT 3030

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Albrimer's disease, AIDS, epllapsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

                                                         The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: or assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate call carcinogenic potential of a compound; (f) assessing the prostate cancer has metastasized in a patient; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated dnaE, dnaX and dnaB genes from Gram positive bacteria, used to develop screening assays for identifying antibiotic compounds

                                                                                                                   The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosinos. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AlbS, epilepsy, neurofibromatosis, rheumatoid arthritis, psorlasis and inflammatory/alcerative bowel diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; prostate cancer; cytostatic; carcinogen; pharmacodyanamic marker;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer, stage of prostate cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        957 AGGAATATGGGGTCGAGTATGCACGTTGGAGTGATTGGCTGTTCTGGAAGAACAGGGAAA 1016

This sequence is the partial dnaw gene of Staphylococcus aureus. The invention relates to a number of isolated DNA molecules from Gram CC invention relates to a number of isolated DNA molecules from Gram positive bacterium, corresponding to dnaE (AAZ31001), dnaX (AAZ31004-231006) are also identified. The PolC, dnaw and dnaG genes (AAZ31004-231006) are also identified. The dnaE gene corresponds to the alpha subunit of the Escherichia coll, DNA polymerase III holocoryme, and corresponds to the alpha subunit is the actual DNA polymerase, the gamma complex forms the clamp loader and tau is a "glue protein". DnaX encodes complex forms the alpha subunit is the actual DNA polymerase, the gamma complex forms the alpha subunit is the full gene, while gamma is the product of the first two thirds of the gene. DnaN forms the beta subunit which forms the sliding clamp, and dnaG encodes a primase. The DNA sequences of the invention can be used to identify agents that inhibit or promote DNA replication by acting on various parts of the gram positive bacterial DNA polymerase holocoryme. The products and methods of the invention can be used for identifying pharmacological agents or lead computing pharmacological agents or lead computing pharmacological agents or lead computed for identifying pharmacological agents or lead computed for agents active at the level of a replication protein forms and particularly DNA replication. The agents identified can be used computed for identified can be used computed to the invention can be used fo

The specification describes DNA molecules from Gram positive bacteria, which comprise a coding region from a polC, dnaE, holB, dnaX, dnaN, ssb dnaG or a dnaB gene. These sequences encode proteins that replicate the chromosome of Gram positive bacteria. They are used for sequencing and amplification of DNA and in drug discovery to identify compounds which have antibiotic activity through interference with replication. They are used in methods for identifying compounds that are active at the level of DNA replication and result in arrest of cell growth or cell death of bacteria to treat bacterial infections in animals.
                                                                                                                                                                                   Isolated DNA molecule from a Gram positive bacterium encoding DNA replication proteins used to identify compounds which have antibiotic activity -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    94 TGAAGTGAGTTCTACCAGTTCATCAAAATGTCTTATTGAAAATAAAGTCTCTTGTGGAGT 153

                                                                                       protein genes, and AAG73346-AAG73448 represent the proteins they encode protein genes, and AAG73346-AAG73448 represent the proteins they encode protein genes, and AAG73346-AAG73348 represent the proteins they encode and Their corresponding secreted proteins are useful for preventing, and their corresponding secreted proteins are useful for preventing, therapy. Pathological conditions can be diagnosed by determining the mouth of the new protein in a sample or by determining the presence of amount of the new protein in a sample or by determining the presence of the languages, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of the last season on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of the last season of the diagnosis or treatment of the last season of the disorders, cancer, tumours, foetal and developmental chormalities, haematopoietic disorders, diseases of the immune system, allergies, neurological disorders (e.g., Alzheimer's disease, alterosalis, cardiovascular disorders, e.g., alzheimer's disease, alterosalis, cardiovascular disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound chasing and epithelial cell proliferation, to prevent skin aging due to culture of primary tissues, to regenerate tissues, to cidentify their cognate ligands or binding partners, and in chemotaxis, and can be used in diagnostic immunosassay endocrate the invention can be used in diagnostic immunosassay endocrate in preservative to medity storger properties.

Antibodies specific for a protein of the invention can be used in diagnostic immunosassay endocrate envent expresents a human cognity and envent assay (ELISA). The present sequence represents a human cognity and protein-encoding cDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

AMH32522-AAH32627 represent cDNAs corresponding to 35 human secreted protein grade and AAG73346-AAG7348 represent the proteins they encode. AAG73449-AAG73519 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be disgnosed by determining the mount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the mount of the new genes. Specific uses are described for each of the amount of the new genes. Specific uses are described for each of the proliferative disorders, cancer, tumours, foetal and developmental enformations autoimmune diseases (e.g., rheumatoid arrthritis), inflammation, allergies, neurological disorders, disbetes, achieroscherosis, candiovascular disorders (e.g., Alzhelmer's disease) candiovascular disorders (e.g., Alzhelmer's disease) candiovascular disorders, angiogenic disorders, and infections. The proteins can also be used to aid wound closured and disorders, pregnancy-related disorders, endocrine closurders, and infections. The proteins can also be used to aid wound closure of primary tissues, to regenerate tissues, to identify their connected ligands or binding partners, and in chemotaxis, and connected in chemotaxis, and connected in the invention can be used in

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (1) amino acid sequences given in AAM82170 to AAM91921. (1) have cytostatic activity, and can be used in gene therapy and vaccine production. (1) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (1) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (1) by expressing inactive proteins or to supplement the patients own production of (1). Additionally, (1) polynucleotides may be used to produce the secreted (1), by inserting the nucleic acids into a host cell and culturing the cell to express the proteins and polynucleotides may be used to produce the secreted (1), by inserting claspinose and treat immune/haematopoietic-derived cells. AAK64703 concers and cancer metastases of haematopoietic-derived cells. AAK64703 concers and cancer metastases of haematopoietic-derived cells. AAK64703 concers from the present invention. AAK654942 to AAK64950 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis \cdot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure; SEQ ID NO 23239; 3071pp + Sequence Listing; English.

AAX AAX64951 to AAX64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAAM8120 to AAA91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynuclectides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynuclectides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynuclectic-derived cells. AAK6401 cancers and cancer metastases of haematopoietic-derived cells. AAK6401 to AAK878494 represent human immune/haematopoietic acids ind AAK6402 sequences from the present invention. AKK6442 to AAK6400 and AAK81699.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     694 TICTAAGTAATCAAGAAAAATCTTGGACAATAGCTTTTCCATAGAGAAAACCGTGAGGA 753

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   the invention relates to a nucleic acid (I) comprising a segment of 18 bases of chemically pretreated DNA of andiogenesis associated genes (II) having sequences (ABQ66971-ABQ67178) or their complements. (I), also related oligomers, are used to evaluate the methylation status and/or single-nucleotide polymorphisms, in angiogenesis-related genes, for diagnosis and treatment of eye diseases proliferative rethiopathy, necular dispersive inflammation, rheumatoid arthritis, diabetic rethiopathy, macular degeneration caused by neovascularisation, psoriasis, arteriosclerosis, inflammatory bowel diseases, ulcers and crohn's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human, angiogenesis, methylation; eye disease; glaucoma; tumour; inflammation; rheumatoid arthritis; diabetic retinopathy; antiulcerds; mancular degeneration; inflammatory bowel disease; Crohn's disease; antirheumatic; antiarthritic; antidiabetic; antipsoriatic; antiarteriosclerotic; ds.

                                                                                                                                                                                                                                                                                                                                                                                           RESULT 46
```

```
The present sequence is the genome sequence of Listeria monocytogenes EGD-e. This sequence and fragments of this sequence are useful for selecting probes and primers for detecting genes in L. monocytogenes and related organisms, and to study genetic polymorphisms and other genomes. Proteins (ABB47297-ABB50149) expressed from the present sequence are monocytogenes and related organisms, and for biosynthesis and biodegradation, especially biosynthesis, identification of L. biodegradation, especially biosynthesis of Vitamin B12. This sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication and modulate L. monocytogenes-related diseases. In addition, this sequence and proteins encoded by it are useful in pharmaceutical and vaccines compositions for the treatment or prevention of infections by L. monocytogenes and related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           organisms.
Note: The sequence data for this patent did not form part of the printed
specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      C, Frangeul L, Couve E, Rusniok C, Fsihi H, Dehoux P; Cetcuani F, Nedjari H, Glaser P, Kunst F, Cossart P; Geobel W, Kreft J, Kuhn M, Ng E, Vazquez-Boland JA; sernal G, Garrido-Garcia P, Tierrez-Martinez A, Amend A; T, Domann E, Hain T, Berroe P, Charbit A, Durant L; J, Baquero F, Garcia Del Portillo F, Gomez-Lopez N; De Pablos B, Wehland J, Kaerst U, Entian K, Hauf J;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Genomic sequence for Listeria monocytogenes, useful e.g. for treatment and prevention of Listeria and related bacterial infections, and

Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to the oplynucleotide which comprises a 1'-end sequence of a polynucleotide which comprises a 1'-end sequence of sequence complementary to a polynucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence; where the complementary to a sequence/3'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and

in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-iength cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length AAH13613 to AAH1842 represent human cDNA sequences; AAB92446 to AAH13631 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                     816 AGCAACCTTCCCTTTGATTCTTTGATAATGACAGAAGATGAACAAAGAGTAAGTTTTTGA 875

Where a primer set comprises: (a) an oligo-dr primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises as 5 - end sequence and an oligonucleotide which comprises 5 - end sequence complementary to a polynucleotide which comprises a 3 - end sequence complementary to a polynucleotide comprises a 1 - end sequence complementary to a polynucleotide comprises a 1 - end sequence complementary to a polynucleotide comprises a 1 - end sequence combination of the 5 - end sequence is selected from those defined in

the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the fill-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH3633 to AAH1872 represent human cDNA sequences; AAB92446 to AAH13639 represent human amino acid sequences; and AAH3629 to AAH13632 represent coligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                               816 AGCAACCTTCCCTTTGATTGATAATGACAGAAGATGAACAAAGAGTAAGTTTTTGA 875

*NOTE: This is a "working draft' sequence. It currently consists of 5 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary caps between the contigs are represented as runitars of N, but the exact sizes of the gaps are unknown. This secord will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Center project name: L4056

```

```
unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones. Exceptions are indicated by an explicit note.

Exceptions are indicated by an explicit note.

IMPORTANT: This sequence is not the entire insert of clone KOBFB. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

The true left end of clone KOBFB is at 260B1 in sequence Z66499.

The true right end of clone KOBFB is at 101 in sequence Z66499.

The start of this sequence (1. .100) overlaps with the end of sequence Z66499.

The end of this sequence (41146. .41246) overlaps with the start of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          join(14261. __14391,14466. __14841,15072. __15294,15377. __15633,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           IMPORTANT: This sequence is NOT necessarily the entire insert of the specified clone. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /commonstantel

On Dec 12, 1996 this sequence wustl.edu from computer analysis, using
predictions from Genefinder (P. Green, U. Washington), and other
available information.
Current sequence finishing criteria for the C. elegans genome
sequencing consortium are that all bases are either sequenced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1132 AAAAGTCCGGCTCCGTAAGCTTTTTTCTCCCCATCTTGTTGACAGATTCCAAATT 1073
